

PRODUCT FEATURES

Xenon uses standard dispersed alarms so that landlords are free to choose from market leading brands.

Because it incorporates a telephone network, Xenon offers free calls between residents throughout the site.

Dispersed alarms are supported by a range of Telecare sensors and alarms.

The system prioritises calls to ensure that emergency calls are not delayed.

Information about the type of call is provided on the warden's handset in an emergency.

Building alarm systems such as fire, intruder and door entry can be integrated into the system.

Door entry and warden call can be provided in one system to simplify installation.

Video door entry facilities can be provided through a video handset for wardens.

Xenon is designed to meet the European standard for warden call system (EN50134)

USER BENEFITS

Landlords can standardise on products from preferred suppliers, leading to savings in purchase costs.

This offers real value to residents and improves community links on the site.

This means that landlords can offer the right sensor for an individual's needs in line with supporting people.

Emergency calls can be dealt with urgently and the right support provided for every emergency.

This information allows the warden to ensure the appropriate response to every alarm call.

Because all systems are integrated staff are quickly updated with alerts that affect the site.

This offers reductions in installation and maintenance costs and improved reliability.

This improves building security and can form part of a crime reduction strategy.

Specifiers can feel safe in the knowledge that their system adheres to modern best practises.
